Networking Professional

+62 851-7962-9045 | dzakwanarefendi@gmail.com | dzakeff.github.io | Bogor, Indonesia

Summary

Cybersecurity and network security enthusiast with hands-on experience in network deployment, troubleshooting, and infrastructure security. Currently working as a Technical Support at PT Maxindo Mitra Solusi, handling network installations, onsite troubleshooting, and router hardening in production environments. Experienced in analyzing network traffic, implementing security configurations, and managing enterprise networking solutions. Seeking an opportunity to grow as a Security Analyst and contribute to threat detection and infrastructure security.

Experience

PT Maxindo Mitra Solusi - West Jakarta, Indonesia

Technical Support Staff

May 2025 - Present

- Deployed and configured network infrastructure from scratch including routers, switches, and access points
- Led network deployment project at a hospital environment ensuring network readiness for operational use
- Performed onsite troubleshooting for issues such as slow connectivity, network loops, and device connectivity problems by analyzing network traffic and identifying abnormal network behavior
- Conducted MikroTik router hardening and implemented security configurations to improve network security
- Researched and tested Huawei NCE-Campus solutions for enterprise network authentication

Technical Support Intern

Jan 2024 - Jun 2024

- Conducted network device requirement assessments during customer site visits
- Installed and configured networking devices including MikroTik, Ruijie, and UniFi
- Assisted in troubleshooting network disruptions and performing routine infrastructure maintenance

Activities

Cyber Security Bootcamp Student — ID-Networkers

- Selected for the program through a Capture The Flag (CTF) challenge
- Completed a 10-week intensive cybersecurity bootcamp covering Linux security, penetration testing, SOC labs, web security, and cloud security
- 2nd Place Winner — Information Network Cabling, LKS Bogor City Level (2025)
- Cybersecurity Blue Team & Red Team Training — Cyberilma
- Educational Visit — Pusbang SDM BSSN

Education

Wikrama Bogor Vocational High School

2022-2025

Network Engineering and Telecommunications

Relevant Cybersecurity Studies:

- Cybersecurity fundamentals including application security, cryptography, endpoint security, malware analysis, and digital forensics
- Hands-on cybersecurity learning covering threat analysis, system protection, and security investigation concepts

Additional Technical Focus:

- Linux System Administration (VMware, VirtualBox)
- AWS Cloud Fundamentals
